(54) TELEPHONE SET SERVICE SYSTEM

(57) Abstract:

PURPOSE: To improve the operability for user by displaying various menus, messages, or the like on the display part of a telephone set.

CONSTITUTION: A personal telephone directory including one or more destination IDS and their names and telephone numbers is inputted from a computer terminal 13 correspondingly to each telephone set user and is registered in a personal telephone directory data base 15a of a data base part 14a. When a function key is operated to indicate a call using the personal telephone directory, an electronic exchange 12 reports the ID of the telephone set user, which is inputted from a telephone set 11 after this indication, to a computer 14, and the computer obtains the personal telephone directory of this telephone set user from the personal telephone directory data base 15a and transfers it to the telephone set 11 through the electronic exchange 12 to display it on a display part 11b. The electronic exchange 12 calls the selected destination based on the displayed personal telephone directory. Address registration and display, message registration

and display, and common message registration and display control are performed in the same manner.
